

Sugar Desk & Sugar Module — Daily Work Report

Date: 29 August 2026

Project: Sugar Module (Frappe v16 + Vue 3 Single Page Application)

Organization: Rajendra Narahari Lokhande (Sugar Trading Division) / CBD IT Solutions Pvt. Ltd.

Branch / Repository: sugar-module on rohansapkale/Sugar_Module

1. Executive Summary of Today's Accomplishments

Today's development session focused on refining the **Sugar Desk Single Page Application (SPA)** to achieve authentic Tally-grade keyboard velocity, robust universal cross-database search, pixel-perfect UI adjustments, official CBD IT Solutions branding, and comprehensive developer documentation.

Summary Metrics:

- **Major Features Delivered:** 5
 - **Bugfixes & Keystroke Isolation Enhancements:** 3
 - **Commits Pushed to GitHub:** 7 (0bc6957, a606b63, bd7472e, 8c22228, bb2a94a, 74845ad, cbd8629, 7443389)
 - **Documentation Artifacts Produced:** Markdown, DOCX, and PDF developer guides published.
-

2. Key Modules & Features Implemented

2.1 Re-Engineered Voucher Shortcuts & Category Drill-Down Navigation

- **Custom Voucher Hotkeys:** Re-mapped direct voucher shortcuts to the exact user specifications:
 - **P** → **Sugar Purchase Voucher** (/voucher/purchase)
 - **D** → **Dispatch Entry Voucher** (/voucher/dispatch)
 - **Y** → **Purchase Payment Entry** (/voucher/payment)
 - **R** → **Broker Party Payment (Receipt)** (/voucher/receipt)
 - **T** → **Contra / Bank Transfer** (/voucher/contra)
 - **Category Filter Tabs (MenuPanel.vue):**
 - Implemented interactive category switcher tabs at the top of the right sidebar:
 - Pressing or clicking **M** switches sidebar to **MASTERS** (Suppliers, Brokers, Customers, Items).
 - Pressing or clicking **V** switches sidebar to **VOUCHERS** (Purchase, Dispatch, Payment, Receipt, Contra).
 - Pressing or clicking **R** switches sidebar to **REPORTS** (Purchase Register, Dispatch Register, Broker Receivables, Supplier Payables, Day Book).
 - ALL tab displays all sections simultaneously.
-

2.2 Authentic Tally-Style Capitalized & Underlined Hotkey Highlighting

- Enhanced all menu rows, category badges, and navigation labels to highlight the exact shortcut letter:
 - **Capitalized, Bolded in Gold (#facc15), and Underlined:**
 - <u>P</u>urchase → **P**
 - <u>D</u>ispatch → **D**
 - Pa<u>y</u>ment Entry → **Y**

- Receipt Entry → **R**
- Contra / Bank Transfer → **T**
- MASTERS / VOUCHERS / REPORTS
- Suppliers, Brokers, Customers, Items, Loans, Stocks, Outstanding.

2.3 Universal Global Search Bar (Positioned Above KPI Cards)

- Developed a high-speed, multi-table database search endpoint `universal_global_search(query)` in `api.py`.
- **Search Capabilities:**
 - **Specific Transactions / Vouchers by ID or Reference:** Search by purchase ID (PUR-2026-0001), dispatch ID (DIS-ENT-2026-0001), payment ID, **Bank UTR Number**, **Vehicle Number** (e.g. MH19CZ1234), rate, or amount → Opens that voucher in **Read-Only View Mode**.
 - **Masters by Details:** Search sugar mills, brokers (with city & mobile), customers, sugar grades (S-30, M-30), and bank/cash accounts.
 - **Reports & Screens:** Gateway, registers, Day Book, and outstandings.
- **UI Positioning & Keystroke Isolation:**
 - Placed the search bar spanning the main content area directly above the 10 KPI Metric Cards.
 - Added `<ctrl+g>` hotkey badge and green helper hint (*← Press Ctrl+G to focus search*).
 - Fixed database schema query fields and isolated input keystrokes in `useKeyboardEngine.js` so typing in the search bar never triggers navigation hotkeys.

2.4 Official Branding & Logo Integration

- Embedded the official **CBD IT Solutions Pvt. Ltd.** logo in:
 - Gateway Dashboard header next to Gateway of Sugar.
 - Top navigation bar next to SUGAR DESK.
 - Browser tab favicon (`/logo.png`).
- Cleaned up subtitle under Gateway of Sugar per user feedback.

2.5 Comprehensive Developer Architecture & Technical Guide

- Authored a complete technical specification document explaining:
 - System architecture and REST RPC pipeline (`useFrappeApi.js` → `api.py` → MariaDB).
 - Detailed function reference for `get_gateway_metrics`, `universal_global_search`, `save_voucher`, `get_day_book`, and `get_register_data`.
 - Keystroke isolation architecture and event lifecycle.
 - End-to-end execution traces and deployment build workflows.
- Exported and published in **Markdown (DEVELOPER_GUIDE.md)**, **Word (.docx)**, and **PDF (.pdf)** formats.

3. Git Commits Log (Today)

Commit Hash	Commit Message
0bc6957	

Commit Hash	Commit Message
	feat: Configure requested shortcuts: P (Purchase), D (Dispatch), Y (Payment), R (Receipt), T (Contra) and dynamic category tabs M (Masters), V (Vouchers), R (Reports)
a606b63	feat: Add authentic Tally-style bold underlined hotkey letters across all menu items and category tabs
bd7472e	feat: Add Center Universal Global Search Bar capable of searching any transaction by ID/reference/UTR/vehicle, any master, or any report
8c22228	fix: Fix universal search backend schema filters and keyboard event isolation while typing in search box
bb2a94a	fix: Remove subtitle under Gateway of Sugar title
74845ad	feat: Position Universal Global Search Bar directly above KPI metrics grid with Ctrl+G hotkey hint matching UI design
7443389	feat: Use official CBD IT Solutions logo in topbar, gateway header, and favicon
cbd8629	docs: Add Comprehensive Developer Architecture and Technical Integration Guide (Markdown, DOCX, PDF)
