

Sugar Desk — Trade ERP Documentation

Frappe v16 Module · Tally-Style Keyboard Accounting & Allocation

Sugar Desk is a dedicated trading, stock allocation, and rapid accounting system developed for Frappe sugar_module. It connects directly with the Frappe MariaDB database, delivering sub-second keyboard data entry, live available stock tracking, and financial dues auditing.

Figure 1: Sugar Desk Gateway with live metric cards, pending financial dues, and Dark Mode theme.

1. Gateway Dashboard & Architecture

Production URL:

<http://157.15.203.96:8001/sugar-desk>

Vite Dev Server:

<http://157.15.203.96:8080>

The dashboard provides a 6-card real-time summary of trades and pending dues:

- **Sugar Purchases (L)**: Total procurement contracts from sugar mills.
- **Dispatches (K)**: Total sales dispatches and deliveries to buyers.
- **Sugar Mills / Suppliers (U)**: Sugar mill directory with aggregate live stock.
- **Brokers Directory (B)**: Registered trade brokers and dispatch histories.
- **Broker Receivables Report (O)**: Outstanding pending payments from brokers and buyers.
- **Supplier Payables Report (S)**: Outstanding money owed to sugar mills.

2. Linked Voucher Entries & Stock Allocation

Figure 2: Dispatch Entry (F8) with Source Sugar Purchase lot selector and live available stock badge.

A. Dispatch Entry (F8 / D)

Enables sales deliveries to customer parties via trade brokers with linked stock allocation:

- **Source Sugar Purchase Lot Selector:** Lists purchase lots in descending order with live available stock badges (e.g. YEDESHWARISUGAR-4000-0020 [Stock: 3,800 Qtl]).
- **Live Stock Info Banner:** Automatically reveals the Mill Name, Sugar Grade, and available unallocated stock upon lot selection.
- **Inventory Auto-Deduction:** Validates against available stock and decrements available_qty_quintal in Frappe on voucher submission.

B. Purchase Payment (F5 / Y)

Direct supplier payment recording against procurement contracts:

- **Source Purchase Lot Auto-Fill:** Selecting a purchase lot automatically pre-fills the Sugar Mill, Grade, and Total Purchase Value.
- **Modes Supported:** RTGS, NEFT, Cheque, UPI, and Cash with UTR / Reference No. tracking.

C. Broker Party Payment / Customer Receipt (F6 / R)

Receives payments from buyers via brokers against past dispatches:

- **Source Dispatch Entry Auto-Fill:** Selecting a dispatch entry automatically populates the Customer Party, Broker, and the exact remaining balance due.

3. Outstanding Financial Reports

Figure 3: Broker Outstanding Receivables Report (O) with KPI totals and itemised group breakdown.

A. Broker / Customer Outstanding Receivables (O)

Route: /register/broker-outstanding
Displays Total Outstanding Due, Total Billed Value, Total Collected, and lists all unpaid/partially paid dispatch vouchers grouped by Broker.

B. Supplier / Mill Outstanding Payables (S)

Route: /register/supplier-outstanding
Displays Total Payables Due, Total Purchased Value, Total Paid, and lists all unpaid purchase lots grouped by Sugar Mill.

4. Trade Registers & Audit Reports

Register Name	Shortcut	Route	Key Information
Sugar Purchases	L / F9	/register/purchase	Lot ID, Mill, Grade, Qty, Rate, Total Amount, Available Stock
Dispatches	K / F8	/register/dispatch	Dispatch ID, Date, Buyer Party, Broker, Qty, Rate, Balance Due
Sugar Mills List	U	/register/supplier	Mill Name, Group, Total Lots Count, Total Qtl, Total Value, Available Stock
Brokers Directory	B	/register/broker	Broker ID, Name, Mobile, City, Total Dispatches Qty, Pending Balance
Customer Parties	C	/register/customer	Customer ID, Party Name, Customer Group, Territory
Day Book Audit	F10	/daybook	Chronological double-entry debit/credit ledger feed for all vouchers

Figure 4: Tally 'Alt+G' Go To Command Palette for instant keyboard search and navigation.

5. Keyboard Navigation & Theme Controls

- **Command Palette** (Alt+G / Ctrl+G / Ctrl+K): Instant floating search to jump to any voucher, register, report, or master directory.
- **Dark / Light Mode** (☐ / ✱): Instant theme toggle located on the top navigation bar with persistent localStorage storage.
- **Single-Command Maintenance Script**: `./fix_bench.sh --start` automatically kills lingering background ports and starts bench cleanly.
